Coordinate (UTM):

North 4 2 0 7 5 0 0 mEast 6 1 3 6 0 0 mZone 11DEVELOPMENT: Some fluorspar has been hand cobbled and stacked next to the outcrop.ACTIVITY AT TIME OF EXAMINATION: None

GEOLOGY: The vein is in a pod shaped configuration on the westside of an outcrop of altered lith<sup>ic</sup>-rich volcanic breccia. Locally the breccia forms very steep outcrops and ridge makers of highly silicified material. Sample 1771 was selected from the pile stacked next to the outcrop as well as from the outcrop, it did not have detectable Au.
