NAME OF PROPERTY

Mary and Crown Group

James H. Wren, Jr.  
4317 D St.  
Sacramento, California

LOCATION

Red Canyon Mining District, Douglas County, Nevada, about 14 miles from Hudson, a station on the Copper Belt Railroad.

GEOLOGY

Areal geology consists of a granite uplift later intruded by siliceous dikes. Principal exposure on the property in which mineralization is evident is an irregular vein ranging from a mere seam to 6 inches in width. Mineralization is in the form of small discontinuous lenses, containing lead, antimony, and arsenic minerals in a quartz gangue. They are said to show high values in silver and lead.

DEVELOPMENT

About 200 feet of adit tunnel and crosscuts carried out on minor structures. Crosscuts driven without reference to mineralization.

No ore reserves.
