PROPERTY NAME: Sample Location 946

OTHER NAMES:

MINERAL COMMODITY(IES):

TYPE OF DEPOSIT: Shear?

ACCESSIBILITY:

OWNERSHIP:

PRODUCTION: Unknown

HISTORY:

County: White Pine Hem 58

Mining District: Robinson

AMS Sheet: Ely

Quad Sheet: Ruth 7 1/2'

Sec. 6 T 16N R 63E

Coordinate (UTM):

North 4 3 4 9 9 1 0 m

East 0 6 7 8 4 9 0 m

Zone +11

DEVELOPMENT: A few dog-hole prospects by road on way to shaft. Shaft is vertical 30' deep & 6' in diameter at collar.

ACTIVITY AT TIME OF EXAMINATION: None

GEOLOGY: Shaft explores marly white very fine grained mud or siltstone at surface. Rock is possibly bleached & silicified as it contains no carbonate.

At depth the shaft explores a dull grey (dolomitic) limestone with a marly appearance. Some of the rock is recrystallized to coarse clacite on near & on fractures.

On the dump, I observed Fe-silicified cemented fine pebble breccia which contains gossan pods & fragments of silicified siltstone & limestone. Platy siltstone & slicked rock were also found on the dump. No mineralization observed.

The country map shows PR Reipe Springs l Ely limestone in this area.
