

3990 0010

(100) Item 14

PROPERTY NAME: Sample Site 1082  
OTHER NAMES: \_\_\_\_\_  
MINERAL COMMODITY(IES): Sulfides  
TYPE OF DEPOSIT: Vein  
ACCESSIBILITY: See map, road good  
OWNERSHIP: Unknown  
PRODUCTION: Small to none  
HISTORY: Unknown

County: Esmeralda  
Mining District: Rock Hill  
AMS Sheet: Tonopah  
Quad Sheet: Rock Hill 7.5  
Sec. 3, T 3N, R 36E  
Coordinate (UTM):  
North 4 2 2 2 4 4 0 m  
East 0 4 1 6 2 4 0 m  
Zone +11

DEVELOPMENT: None

ACTIVITY AT TIME OF EXAMINATION: None, but there has been within the last couple of years

GEOLOGY: Site is single inclined shaft, approximately 50 feet, trending SW, 75°, with about 10 peripheral dog holes, some dozer work, Host rock possibly mud/silt stone, however, inclusion in rock indicate that it may be a fine-grained volcanic. Rock cut with fingerings of sulfide bearing quartz vein, fractured, with a fragile, platy mineral coating the surface. Dump coated with yellow-green oxide from the oxidization of the sulfides. Sulfides are extremely fine grained (pyrite and chalcopryite), and also associated with the host rock near the vein was hematite/limonite staining. Vein is small and ~~steeply~~ dips SW.

REMARKS: Sample Site 1082
