DESCRIPTION (continued) sericitized, and contains pyrite that has been changed to iron oxide. Most of the veins show little quartz. The mineralized material is largely soft, white kaolinite. In general the deposits do not have definite walls. The principal property is the Brown-Palace Mine on the Golden Jupiter unpatented claim owned by Paul Webster of Rosebud. Total development work about 1,600 feet of tunnels. It is necessary to screen the ore to get a shipping product. The minus 1 inch screen product shipped constitutes about 50% of the mine-run material. There are a number of nearby lode claims that have been relatively unproductive.
