HISTORY: Unknown

East 0 6 9 1 1 0 0 m

Zone +11

DEVELOPMENT: 2 shafts, vertical, approximately 1,000 feet underground workings, fenced  
off

ACTIVITY AT TIME OF EXAMINATION: None

GEOLOGY: Workings follow a N70E shear zone. The western shaft shows less than 1 foot wide shear, while the eastern side the shear broadens to approximately 10 feet with a 70S dip. The workings are in granitoid intrusion cut by andesitic dikes which are propylitically altered. The intrusive and dike are highly fractured with a set of fractures prominently striking due north, dipping 40E. The fractures (and breccia found on the dump) are cemented with crystalline quartz and are FeOx stained.
