Item 10  
92

(250)  
Mine Name: Catlin group

MILS Sequence No.: 3202300427

Location: Sec. 35, T 1 N, R 49 E

County: Nye

Commodity: Silver, Gold

Production: Kral (4) reported that shipments were made as early as 1906; however, the amount is unknown. About 241 tons valued at \$3,672 was reportedly shipped in 1941. Much of this material is believed to have come from the mine dumps. U.S.B.M. indicates the property produced a total of 552 tons yielding 74 ounces gold and 20,050 ounces silver from 1907 to 1944.

Mining District: Silverbow

Geology: Ore occurs in a quartz vein 2 to 8 feet wide in rhyolite country rock. Silver chloride (cerargyrite) is the main ore mineral near the surface, and silver sulfide at depth.

Development: The workings include several adits and short shafts and some drifts and stopes on the vein.

Period of Activity: This is one of the older mines in the district. It was operated prior to 1906. There was some underground activity from 1941 to 1944. Ekren (13) reported that some properties in the district were being reopened in 1964; it is not known which properties were involved.
