DEVELOPMENT: Prospect pit

ACTIVITY AT TIME OF EXAMINATION: None

GEOLOGY: A N50°E, 55°NW vein in rhyolite that ranges in width from 4" to 16 and can be traced on the surface for over 300 feet. The vein is silicified vuggy and coated with drusy quartz or barite filled vugs. Some of the vein is solid bladed sulfide crystals of stibnite while some of the vugs contain oxides such as antimony.
