HUMBOLDT KING MINING COMPANY

Pitting, Nevada, May 1, 1910

Messrs. Makeever Bros.,
170 Broadway, N.Y.

Gentlemen:

In sending you this brief report I am aiming to send you data that will be helpful for future reference. The first work in opening the mine the last time was started on May 8, 1909, and the work was carried out, as follows:

1909			
May	8th to May 11th,	Filling boiler, repairing, packing and lowering pump	4 days
"	11th " " 22nd,	Pumping out to 225' Station	10 "
"	22nd " " 27th,	Mucking out 225' Station for big pump	5 "
"	27th " June 6th,	Pumping out to 300' from 225'	10 "
June 6th	" Oct. 17th,	Mining Operations (Drifting)	133 "
Oct. 17th	" Nov. 27th,	Retimbering 200' of old rotten shaft	42 "
Nov. 27th	" Jan. 18th,	1910 Mining Operations	50 "
1910			
Jan. 18th	" " 23rd,	Pumping out only, no coal	7 "
" 23rd	" " 25th,	Pulling up pumps, pipes and timbering	2 "
Total Number of Days in Action			263 "

We were engaged in mining operations 183 days of six months and 3 days. During that time were run tunnels to the amount 737' in length, which cost \$8,950. in labor at \$4.00 per day, - \$9.08 per ft. for the labor of mining, mucking and timbering, which equals 127.81' per month.

Of this work 315' was in the hard solid ore and 452' was in rhyolite and porphyry.

✓
225' and also some later on the 300'.

There has not been any ore taken out for mining between the 225' and the 300' levels. It is all opened up and 2 ore chutes put in on the 300' level for loading, ready to begin stoping for actual mining, leaving thousands of tons of ore practically in sight and a chance of opening up even bigger and better prospects. I have great faith in the mine and feel confident it can be made a good dividend payer.
