Mine Name: Sterlog group

MILS Sequence No.: 3202300429

Location: Sec. 4, T 5 S, R 44 E

Commodity: Silver

Production: None reported

Mining District: Stonewall

Geology: Little is know of the deposit's geology other than the vein contained some silver minerals.

Development: Workings include a 240-foot shaft and a mile-long adit.

Period of Activity: The Stonewall district was first prospected in 1905, and apparently small shipments were made in 1911 and 1915. The long adit on the Sterlog claims was driven in the 1920's; the property was subsequently abandoned.
