MINERAL DEPOSIT ALONG WESTERN PACIFIC RAILROAD

PORTOLA TO WINNEMUCCA

PROPERTY NAME:

Sulphur District

**LOCATION:** Humboldt County, Nevada1 approx.
1/4 OF 1/4 OF SEC 34 & 35 TWP 35N RGE 29E**DISTRICT:** Sulphur (Black Rock)**MILEPOST:** 480**POTENTIAL:**☐ LARGE☐ IMMEDIATE☐ MEDIUM☐ NEAR FUTURE☐ SMALL☐ DISTANT FUTURE☐ UNKNOWN

DESCRIPTION: The silver deposits, discovered in 1908, occur at the south end of the sulphur deposits a short distance from a place called Devil's Corral, a natural amphitheater formed by highly colored rocks. The principal property in the early days was the Silver Camel mine, production said to have been over \$100,000.00 in high-grade silver ore from 1908-1912 principally by lessees. In recent years the only mining has (over)

RESERVES: Past production to have been over \$100,000.00

ACCESS: 3 miles north to Western Pacific Railroad at Sulphur.

OWNERSHIP: Crofoot Lumber Co., Ukiah, Calif.

SOURCES OF DATA: U.S. Bureau of Mines, Information Circular 6995, p. 47, 1938

ECONOMICS:

CONCLUSIONS: Presumably mined out.

Description (Continued)

been done by James Brown of Sulphur, Nevada on the Hornsilver Claim.

Development consists of a number of trenches and shallow shafts totaling about 1,500 feet. The deepest shaft is 95 feet deep.

Silver occurs as cerargyrite (hornsilver) in narrow seams varying from a fraction of an inch up to 4 inches in width. No ore was found at a depth greater than 20 feet from the surface. An adit was driven 300 feet to top the ore zone at depth, but it did not disclose anything of importance. The deposits are unusual in that the narrow seams of cerargyrite occur in a cemented conglomerate.
