

4840 0058

PROPERTY NAME: Sample Site 439

OTHER NAMES:

MINERAL COMMODITY(IES): Ag-Au

TYPE OF DEPOSIT: Epithermal vein.

ACCESSIBILITY:

OWNERSHIP:

PRODUCTION: Probably none.

HISTORY:

DEVELOPMENT: Deep shaft, no head-frame

ACTIVITY AT TIME OF EXAMINATION: None.

GEOLOGY: Geology and geochemistry for district described in Bonham and Garside (1979,1982). This shaft probably never reached mineralized Mizpah Fm., although it began in Siebert Fm, penetrated fraction tuff, and got into propylitized Mizpah. No vein quartz was noted on Fe dump.

REMARKS: Photo A5-"9D" dump of shaft, Three Hills property in far background (right), For Sale sign.

Sample 439 of propylitized Mizpah Fm from dump; compare with sample in Bonham and Garside(1982).
