

Adjoining Strikes

LUCKY BALDWIN

The new incline shaft on the Lucky Baldwin mine at Gold Mountain is down twenty feet, the full width being in shipping ore which is now being sacked and will average \$120 per ton in gold. R. T. Brodek, the manager, has ordered a gasoline hoist which will be installed on the ninety foot shaft.

The above is an extract taken from the Mining and Engineering Review of August 6, 1904. The Lucky Baldwin property adjoins the GOLD BELT and the strike referred to above was made just 500 feet from our shaft on the same ledge.

WORLD'S GREATEST MINES

Tonopah, with its wonderful mines and the territory surrounding it, is exceeding in production and development the optimistic predictions of the REVIEW more than a year ago. Sceptics grudgingly admit the truth, but the cold facts are forcing the belief upon the most pessimistic that the greatest mines in the world are being opened along a mineralized belt of 100 miles in length and more than 20 miles wide. Goldfield, 24 miles south of Tonopah, is the present southern limit of this broad and unusually high grade mineral belt. Ore bodies worth thousands of dollars per ton are met with frequently.

The belt between Tonopah and Goldfield is pretty well located and is now being actively exploited in all sorts of manner. As elsewhere, and especially in a desert region, it requires considerable coin, guided by proper knowledge, to obtain and develop a profitable mining property. But now, since the advent of railroad facilities into Tonopah, Nye County will be thoroughly explored.

From the Mining and Engineering Review of August 13, 1904.

The property referred to below almost adjoins the GOLD BELT on the east.

GOLD MOUNTAIN

TONOPAH UNION.—High grade shipping ore is being taken from the east drift on the 160-foot level of this mine at Gold Mountain. In the west drift they have struck two feet of the richest ore ever found in the mine.

Taken from the Engineering and Mining Review of August 27, 1904.

REPORT NO. 10

Tonopah Gold Belt Mining Company,

Gentlemen:—

Tonopah, Nev., August 31, 1905.

I am very much pleased to report having struck a ledge in the shaft. It is a splendid looking ledge composed of porphyry and quartz, and heavily iron stained. It is a large vein as we are not through it yet.

It is a north and south vein and dips to the east. The dip is about 45 degrees. It was entirely unexpected, as you know that we will have to cross cut to any of the known ledges on the property. Have not assayed it as yet, as I wish to get through it first, but it certainly is a splendid showing.

We drilled a five foot round into it to-day and will know to-morrow what we developed. Will advise you as to what we open up.

Am anxious to get through the vein and see what underlies it. Am in hopes it is porphyry and from all appearances it is. We can drift on this vein until it intersects the east and west vein, thus saving a cross cut and develop both veins at once. There should be a great body of ore at the junction of the veins.

Everything is looking fine in the Gold Mountain district. Things are going along smoothly at the Gold Belt and sinking is progressing very satisfactorily. The ledge is hard and we are not making quite as good time now. Hope to report something very good in the next letter.

Very truly yours,

FRANK EVERETT.

To the stockholders TONOPAH GOLD BELT MINING COMPANY.

In handing you herewith the latest encouraging report from the mines, I am compelled to call your attention to the unsatisfactory condition of our finances.

Unless we stockholders take an active interest immediately in disposing of a little more treasury stock, we will not be able to continue the development of our property without running into debt and this should be avoided by all means.

While the Superintendent's opinion is that we are now in the immediate neighborhood of a rich ore deposit in the shaft (and the values now being secured amply verify his opinion) I do not deem it good judgment to permit any indebtedness to be incurred in the development of our mines, and I wish all the stockholders to be fully informed in the matter.

Unless we are all able to either subscribe for a small additional block of our treasury stock or secure some out side subscriptions, I believe there is but one other conservative action to take, and that is to close down the work, until we can either make a sale of a sufficient block of the treasury stock, or until some of our neighbors begin paying dividends when there will be no difficulty in raising all the money we need, to finish the development of the Gold Belt property.

In this way we should take no chances in losing our property through debt, and of course, if the stockholders wish, the property can be sold and the proceeds divided equally among all, but I for one, do not want to see this property sold, for I am confident that it will be the making of a great mine.

The Superintendent is confident that another hundred feet of development is certain to show up a large body of shipping ore and I am personally in favor of raising the money to give him a chance to prove his final judgment correct before taking the more discouraging action of closing down even temporarily, or of running the Company into debt, and to raise the \$1000 required, I will subscribe for \$25.00 worth of additional treasury stock at 25c per share cash, and the Directors have instructed me to lay the matter before all of the stockholders, and give them an opportunity to raise the money.

Subscriptions will be received of amounts from \$5 up, at this price and if each stockholder does his part, I do not believe we will ever see the necessity of closing down the property.

Prompt action is required if we are to continue the work, and the Directors request that each stockholder reply to this letter, one way or the other expressing their wishes, regarding the action they desire taken, and if you decide to see the work continue and the Superintendent given an opportunity to complete the development he has mapped out, let all make an extra effort to take another 50 or 100 shares at the above price and this will enable us to continue the work until there is such a showing in the mine, that we will be more than amply repaid for our investment.

Very truly yours,

H. S. MARTIN, Secretary.

From *Tonopah Miner* Jan. 28, 1905

GOLD MOUNTAIN DISTRICT

An Enthusiastic Meeting of Claim- Owners Monday Evening.

A largely attended and enthusiastic meeting of the property-owners of Tonopah Gold Mountain Mining District was held at the Tonopah Opera House, on Monday Evening. Thos. R. Bannerman presided and A. J. Klamp acted as secretary.

In his opening remarks Mr. Bannerman announced that the call for the meeting had been issued by him as president of the district, in accordance with the discretionary instructions he received on the occasion of the organization of the district, March 10, 1903. He dwelt upon the necessity of united action on the part of those present in order to bring about a revival of interest in the district, whose extensive mineral deposits, except in the cases of the larger properties—the Hasbrouck, Tonopah Union, Colehan, Gold Belt, Tonopah Gold Mountain and a few others—had never yet received from either the prospector or the capitalist the persistent labor and attention which the proven richness of the district would justify. Commenting upon a statement he had received a few days previously from George A. Kernick, to the effect that there is already enough high grade ore on the surface at Gold Mountain and Gold Reef to warrant the erection of a mill in that vicinity, Mr. Bannerman earnestly recommended that every legitimate effort be made during the coming spring and summer to induce the agents of capital to examine the showings already made in the developed mines of the district, with a view to obtaining funds sufficient to develop on a large scale such properties as the Lucky Tom, South Gold Mountain and numerous others, both incorporated and unincorporated, now being worked in a small way by their owners.

District Attorney Pittman, James H. Forman, Uri B. Curtis, Chas. Kielhofer, J. W. Travers, D. F. McCarthy, W. L. McGonagill, Frank Everett, Nathan Crocker and other speakers warmly advocated the course suggested, and as an initial step toward the better organization of the district for the purpose named it was resolved that all claim-owners be invited to furnish the secretary of the district with a description of their holdings and such information as will enable him to speak or write intelligently in regard to the location and character of the ground.

RICH ORE SACKED AND LOOSE, NOW ON THE DUMPS OF THE MIZPAH LEDGE
NORTH OF THIS PROPERTY

HAULING ORE FROM THE FABULOUSLY RICH DUMPS
OF THE TONOPAH MINES

NEARLY \$300,000,000 WORTH OF ORE ON THIS DUMP NORTH OF OUR
PROPERTY ON THE MIZPAH LEDGE

REPORT

TO THE

STOCKHOLDERS AND INVESTORS

TONOPAH GOLD BELT MINING CO.

The property of the TONOPAH GOLD BELT MINING COMPANY is very favorably situated at the base of Gold Mountain, between the now famous Mizpah Mines, which have millions of dollars worth of ore in sight and on the dumps, and the New Gold Fields section of the Camp, where miners are now startling the world by the riches they are unearthing.

The value of this property has been absolutely established, during the past six months, by the development on adjoining properties, where depth has opened up rich and valuable deposits of precious gold. Only 500 feet from the present workings, and on the same ledge as the Gold Belt, an adjoining company have tapped a nice body of shipping ore, worth over \$300 per ton, thus proving positively that only development is required to secure handsome returns for every dollar invested.

The organization of the Gold Belt Company was for the purpose of developing the mines, the owners not having sufficient capital for the purpose, and only enough stock will be sold to accomplish such development.

Every person who joins with the Company in furnishing the money now required to make the mines rich producers, will receive in return their just share of the immense profits, which will surely follow the opening up of this rich property.

This property consists of five full claims, nearly 120 acres, situated on Gold Mountain, due south of the Great Mizpah Mine, and it was located by George Grimes, George Wakely, W. A. Calvin, Ross Woodward and their associates, shortly after the Great Mizpah had started to make men rich, and while the choicest locations in the Camp, were open for early prospectors.

These men are among the most intelligent prospectors in the mineral world to-day, and each and all refused to part with their entire interests in this valuable property, although some of the offers made to the lucky owners have amounted to a small fortune, but so certain were they of the fact that only machinery and development were required to make the property worth a million at least more than the offers, all such propositions were refused.

Friends of the locators, who, by the way, were men of limited means like themselves, were appealed to, and they eagerly grasped the opportunity to get in with a small sum on this property, and a company of these men, including the original owners, has been incorporated under the laws of South Dakota for 1,000,000 shares, par value \$1.00 per share; 500,000 or one-half of the total was divided into proportionate amounts, among the owners and their associates, as payment for the property, and the other half was placed in the treasury, only a sufficient amount of which is to be sold to furnish the required money for the development and the machinery, and in disposing of this stock preference is given to those of limited means like the owners, as it is determined to sell the shares in small lots upon the installment plan, at 30c a share on the start, which low price will be within the reach of all small investors. Each 100 shares will cost \$30.00, payable \$3.00 down and \$3.00 per month until paid.

BUTLER'S EXPERIENCE.

The owners of these mines, profited by the experience of Discoverer Butler, who, like them, was without sufficient means to properly work his property, and finally decided to sell the fabulously rich Mizpah for \$336,000 to capitalists who made seventeen millions of dollars on their investment in less than a year's time.

Had Mr. Butler retained the property, and incorporated a company on this plan, he would have received in the end many times the sum the capitalists paid him, and at the same time he could have added to the happiness of thousands of families of limited means by opening an opportunity for them to share in the fabulous profits that have been made by the syndicate who purchased the mine.

A BRIGHT FUTURE.

Rich men are putting fortunes in Tonopah Mines and stock every day, and the Tonopah Gold Belt Mining Company offers the best and safest inducement for those of limited means to safely follow the example of these men of wealth, and secure a much larger return in proportion to the investment on their savings.

RICH MINING INVESTMENTS.

Every person considering any mining investment always has acquaintances who try to discourage him. This has been the experience of every mining man in America who has become wealthy from such investments. The very best answer to such friends is to refer them to multi-millionaire Senator Clark of Montana, who has made a fortune, the interest alone on which is bringing him a daily income of many thousands

of dollars every twenty-four hours. He turned a deaf ear to such advice, and his reward was untold riches. The late Marcus Daly of Montana was another man who died worth many millions of dollars by following his own judgment in mining investments.

The mines of Tonopah alone, furnish hundreds of instances where poor men have become rich by small investments in mining enterprises, and the other mining sections of America swell the list to hundreds of thousands who have profited by following their own careful judgment, and refusing to listen to advice coming from acquaintances, who have not investigated, and only repeat what some person who made an unwise investment told them.

REASONS why stock in the **TONOPAH GOLD BELT MINING COMPANY** is a wise, safe investment:

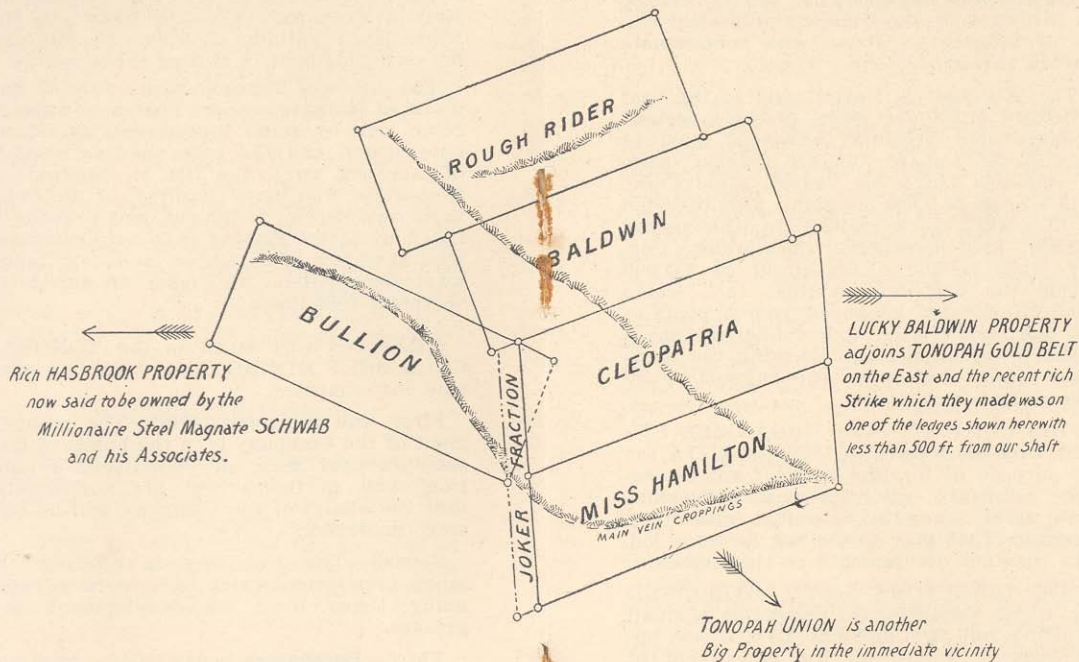

First, and most important—The management of the Company is in the hands of honest, practical men, of established reputation, who, in themselves, are a guarantee that the affairs of the Company will be honestly managed.

Second—The Company is offering the stock at a price which is sure to advance many times over, as development progresses.

Third—Purchasers to-day will be receiving dividends on this stock before their payments are completed, if they purchase on the installment plan now.

Fourth—The stock of this Company is absolutely non-assessable and non-forfeitable.

Fifth—The history of this Camp prove the croppings on this property to be of such richness as to absolutely insure dividends to every stockholder.

ESMERALDO COUNTY, NEV.

Each Full Claim is 600 x 1500 feet
making over 100 Acres owned by the COMPANY

HISTORY OF PRODUCERS.

Instances of the enormous profits realized by investors in other mining properties will be of interest to those who contemplate mining investments.

The "Calumet & Hecla" paid to the first investors \$1,500 for every dollar invested; "Consolidated Virginia" advanced from 11 cents to \$65 a share; "Best & Belcher" from 60 cents to \$1,550 per share; "Gold Coin" paid a profit of 3,000 per cent.; \$100 invested in "Le Roi" stock yielded to the owner \$49,900; \$100 invested in the "Miller" Copper Mine yielded a net profit of \$24,900 within the past few months; the "Home Mining Company" advanced from 30 cents to \$35, and hundreds of other similar instances might be mentioned, all showing the enormous profits that have been enjoyed by investors in mining stock.

THIS COMPANY WAS ORGANIZED UNDER THE LAWS OF SOUTH DAKOTA for the purpose of forming a small non-assessable company, wherein small investors might safely place their earnings with every assurance that they would not be worn out with constant assessments on their stock.

THE DIRECTORS HAVE EXERCISED UNUSUAL CARE for the protection of small investors, and it is undoubtedly the best opportunity presented for the investment of small capital with an equal assurance of large returns in a very short period of time.

James W. Travers, in a recent history of Tonopah, says: The newspapers have not begun to tell of the wealth of the Camp. While Cripple Creek produced \$6,000,000 in the first four years of its existence, Tonopah produced the same amount in eight months, and in October following the first year there was exposed in the mines of the camp ore to the value of over fifteen million

dollars.* As the ledges increase in size and richness as depth is attained, it is impossible to estimate the great wealth which these mines will produce.

EXPERT'S REPORT.

Since the organization of the TONOPAH GOLD BELT MINING COMPANY several reliable expert miners have been sent to sample and examine the rich croppings on this property, and each and every one of them express themselves as satisfied that one of the biggest mines in the Camp is sure to result from the opening up of the immense ore bodies showing on this property.

Here are some of the results secured by careful assays of the samples taken in ten different places on the croppings for 1200 feet, on the ledges running through this property with the letter accompanying them.

WOODWARD'S REPORT.

The following assays are from true samples taken by me from the main ledge of the Tonopah Gold Belt Mining Company's property:

Without an actual measurement and to be conservative, I should judge the main vein to be from two to eight feet in width and traceable the full length of the property; in addition to the main veins there is a parallel vein, not quite so large and carrying lower values. These ledges are about 100 feet apart and their course easterly and westerly. There are also several small stringers running at almost right angles. The ore is free milling and I believe with a little expense and the proper machinery can be made to rank among the foremost of Tonopah Big Producers.

Respectfully yours,

ROSS WOODWARD.

	Total value per ton
No. 1 sample.....	\$145.21
No. 2 sample.....	7.61
No. 3 sample.....	176.85
No. 4 sample.....	136.08
No. 5 sample.....	13.85
No. 6 sample.....	92.37
No. 7 sample.....	79.84
No. 8 sample.....	8.88
No. 9 sample.....	93.84
No. 10 sample.....	55.01

Showing a general average of the ten samples taken of over \$80 per ton on the surface, such results are absolute proof of the richness of these mines, when you take into consideration that all the other mines in the district prove that the ledges of this camp, without an exception, get richer as depth is attained.

What Some of the Most Reliable People of
Tonopah Say About the Property of
the Tonopah Gold Belt Mining
Company.

S. K. Bradford, of the firm of Booker & Bradford, Mining Engineers and Surveyors, said in a recent letter to a friend in this city, advising him to take an interest in this property: "The property of the Tonopah Gold Belt Mining Company has the very best surface showing in the district outside of the main Tonopah mine."

Philip Diedesheimer, one of the most conservative mining experts in California, who had just returned from Tonopah, when asked by a friend regarding the advisability of investing in this Company, replied: "I, of course, never examined this particular

property, but it is situated in the only section of the camp in which I would advise an investment outside of the Mizpah ledge."

Congressman C. D. Van Duzer of Nevada, who is thoroughly familiar with the entire district, says of Gold Mountain: "It is the coming district and the mines there have a great future. They are the making of another Cripple Creek."

PRICES WILL ADVANCE.

The present price of this stock will advance very rapidly as development work progresses, and if you wish to participate with the original owners in the profits which are sure to follow the opening up of these mines fill out the enclosed blank for the number of shares you wish and forward it with first or full payments to TONOPAH GOLD BELT MINING CO., Suite No. 59, Chronicle Bldg., San Francisco.

SUITE 59, CHRONICLE BUILDING

SAN FRANCISCO, CAL

Tonopah, Nevada, May 14, 1907

Tonopah Gold Belt Mining Company,
620 Market St., San Francisco.

Dear Sirs:—I have been at work upon the Miss Hamilton claim belonging to your Company and am still at work thereon. I believe that the property is the making of a first-class mine. I have followed mining for a number of years and am thoroughly familiar with the workings of mines in this district as well as the indications that develop into good mines here. I consider from my experience in this district that the Tonopah Gold Belt will make a first-class property, second to none. The surface showing is certainly much better than many others which have developed into first-class paying properties, and my faith in this property is best shown by the fact that while I am at work, I am putting my earnings into the stock of this mine. I purchased the Tonopah Gold Belt Mining Co. stock on my own judgment and was not solicited by anyone to do so.

Yours respectfully,

F. L. Blair

The Lucky Baldwin.

The face of the west drift on the 60-foot level of the Lucky Baldwin at Gold Mountain is now out about 90 feet, at which point the ledge is 8 feet wide and gives average assays of \$38, with a streak from 6 to 8 inches wide, assaying as high as \$3,000 a ton. Work is progressing very satisfactorily and considerable quantities of shipping ore are being raised.
