

4850 0018 Toy
Toy 22 Prospect (T.25N., R.29E., Sec. 22, Pershing County, Nevada): Two preliminary lines were run for soil samples on a prominently altered and leached zone just south of the Toy 15 A Prospect (Appendix A). The results of this modest survey are shown on Plates 1-8. One anomalous lead sample, and a few scattered molybdenum and lead values at threshold

- 1 -

levels were detected. A similar situation was noted in the November 1969 report in the Toy 15 B Prospect, 2000 feet northeast of the Toy 22 Prospect.

As reported in November the large alteration zone designated as Toy 15 A, has been extensively sampled and complete evaluation of the Toy, Nevada, area anomalies will await plotting of this expanded grid. The area, in general, remains one of potential for further work, due to the anomalous soil geochemistry.
