

4890 0008

PROPERTY NAME: Unnamed prospects

OTHER NAMES: Sample sites 2825 and 2826

MINERAL COMMODITY(IES): Au, Ag

TYPE OF DEPOSIT: Epithermal

ACCESSIBILITY: Poor Dirt road 3 miles west of Sulphur Lovelock road.

OWNERSHIP: U.S. Borax and Southern Pacific

PRODUCTION: Old and not extensive

HISTORY: Old area

County: Pershing

(269)
Item 18

Mining District: Trinity

AMS Sheet: Lovelock

Quad Sheet: Natchez 7½

Sec. 3, T 29N, R 30E

Coordinate (UTM):

North 44 7 5 1 0 0 m

East 03 6 4 9 8 0 m

Zone _____

DEVELOPMENT: Old shafts, adits and prospects including areas of older drilling

ACTIVITY AT TIME OF EXAMINATION: Areas to the south are currently being drilled by Borax which denied access to the older workings..they have several sections under new stakes, including; sections 3-9-10-15-6.

GEOLOGY: The prospects in this portion of the Trinity District are referred to as old silver producers but lead and antimony were also present. The workings are old and shallow, little more than prospects. The workings along Willow Creek were not accessible because of Borax Company policy, however they were in highly altered volcanic ryholites and tuffs which was the same target being drilled by company. The older workings to the north were along quartz vein in older sediments of the Auld Ang Sang Formation of Triassic/Jurassic age. Sample 2825 was from a vein crossing a stream course in sediments that were being prospected by a small adit. The vein was a highly oxidized silicified breccia.

Sample 2826 was from a dump adjacent to a collapsed shaft in breccia and quartz veins..more prospects simular to this dot the land scape along the west side of the range within the older sediments.

Sample 2825 and 2826
