PROPERTY NAME: Mazuma Mine

Mineral Commodity(ies): Au, Ag.

Type of Deposit: Quartz breccia in granodiorite

Accessibility: Poor road along an active stream course.

Ownership: Unknown

Production: Unknown

History: Area worked between 1859 and 1915

Development: Two adits above the Happy Jack Spring in Trinity Canyon.

Activity at Time of Examination: None

Geology: Workings along a shear trending N40°-50°E and dipping 50-70NW. Iron oxide alteration some brecciation. Mineralization is in wispy streaks in the quartz and extends into the granodiorite. Adjacent andesite or mafic dikes are east of the main workings. Sample 2830 is a breccia and quartz vein material with sulfides.
