

5350 0008

PROPERTY NAME: Sample Site 3116
OTHER NAMES: _____
MINERAL COMMODITY(IES): Gold-Silver
TYPE OF DEPOSIT: Vein
ACCESSIBILITY: Two and half miles SE of the mouth of
Willow Creek with no road the last 1.5 miles.
OWNERSHIP: Not staked
PRODUCTION: Unknown
HISTORY: The area was being mined prior to 1916 and
these workings appear to be from that era.

(262) Item 10
County: Nye
Mining District: Willow Creek
AMS Sheet: Lund
Quad Sheet: Nyala 7½'
Sec. _____, T 4N, R 56E
Coordinate (UTM):
North 4 2 2 7 0 9 0 m
East 0 6 1 3 7 5 0 m
Zone _____

DEVELOPMENT: A single adit over 100 feet long.

ACTIVITY AT TIME OF EXAMINATION: None

GEOLOGY: The adit follows a S35°W vein that dips 65°SE. The quartz vein and adjacent veinlet are in limestone that has locally been intruded by highly silicified, iron-stained rhyolite that forms a prominent knob about 150 feet northwest of the portal. The adit is about 100 feet above the creek bed on the southside of the canyon and forms a yellowish brown dump that extends to the bottom of the canyon. The dump material is composed of argillically altered rhyolite, fault gouge and quartz stringers, which made up Sample 3116.
The workings were not on the Nyala map and do not fit any description of mines for the area.
