Zone _____

DEVELOPMENT: Several caved and fenced shaftsACTIVITY AT TIME OF EXAMINATION: None

GEOLOGY: Much of the geology is covered by soil. There are two shafts sunk on
E-W vein that dips randomly. Stopes along the strike have broken
through to the surface partly because of caving. Mill site is below
the dumps. Sample 2378 was taken from the inside of one of the stopes
along the continuous vein. Both quartz and calcite veins are included
in the sample.

Photo's 15 and 16
